SQL Server Answers

SQL Server 2008 Profiler--Templates Missing

For some reason (even after an uninstall, reinstall and updating the the Community Update) there are no templates visible in the Profiler for SQL Server 2008. On another system it works fine but the Trace Provider Type shows "Microsoft SQL Server 2008". On the problem system it shows "Microsoft SQL Server 10.0".

What's up?

Answer 1

A copy of the **templates** should live under "Documents and Settings" folder in "Application Data\Microsoft\Microsoft SQL Server\100\Tools\Shell\Templates". Check if that's the case or not.

Thanks,

Varsham

Answer 2

Check the following path:

C:\Program Files\Microsoft SQL Server\100\Tools\Profiler\Templates\Microsoft SQL Server\100

It contains the available **templates** for SQL Server 2008.

Thanks

Sreekar

Answer 3

Hello William

It seems to be a known issue in case of SQL Server 2008 . Already a defect is raised for it.

Please check this link

**http://connect.microsoft.com/SQLServer/feedback
/ViewFeedback.aspx?FeedbackID=382515**

Thanks

Sreekar

Answer 4

Copy the folder from another SQL Server to your machine, the default path is C:\Program Files\Microsoft SQL Server\100\Tools\Profiler\Templates\Microsoft SQL Server\100, Any question, let me know.

Answer 5

 Could it be that you accidentally ran the **sql** 2005 version of profiler. I did and got exactly that behaviour.

Missing profiler Templates in SQL 2008

Answer 6

        For some reason (even after an uninstall, reinstall and updating
        the the Community Update) there are no **templates** visible in
        the Profiler for **sql** Server 2008. On another system it works fine
        but the Trace Provider Type shows "Microsoft SQL Server
         2008". On the problem system it shows "Microsoft SQL **server**
         10.0".

        What's up?

Here is the actual answer you were all looking for:

The server you are connecting to is a 10.50 sql server and your machine doesnt have a folder for that. So to fix it, copy your 100 folder (found: C:\Program Files (x86)\Microsoft SQL Server\100\Tools\Profiler\Templates\Microsoft SQL Server\100) making a new folder in the same location named 1050.

Everything will work fine now.
